

Real experience. Better dApps.

A feedback and testing community built for
Solana Seeker

Discover useful apps. Share honest experience. Help builders
improve.

The feedback gap between users and builders

For Seeker users

An app listing helps discovery. It leaves little space for a detailed issue, a practical suggestion or a conversation that continues.

For dApp builders

Testing needs clear steps, a specific version and a report that can be reviewed. Generic praise does not explain what to improve.

Our product hypothesis: a repeatable feedback loop helps both sides.

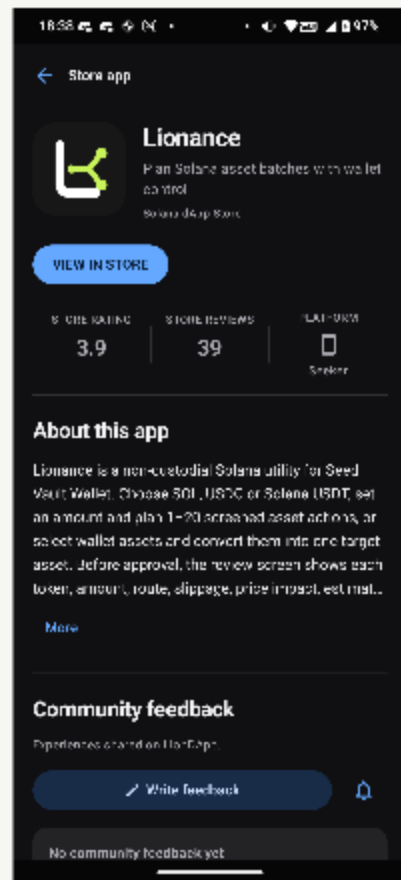

Discovery leads into app-specific feedback

Search the Store catalog

Catalog details remain separate from community opinions.

Share issues, suggestions or praise

Comments and replies have a dedicated space. Users can follow a conversation and see author-reported outcomes.

Free testing has a reviewable workflow

Rules, reservation, report and review

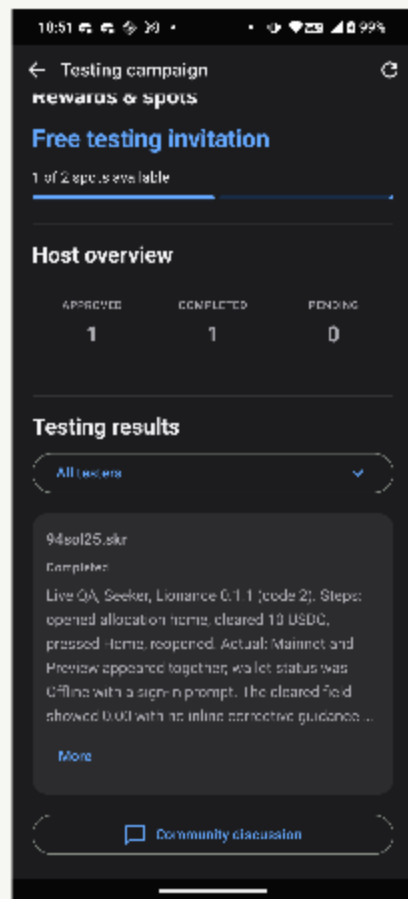

Clear requirements

App version, steps, capacity, deadline and report requirements are explicit.

Report review

Separate reports, one correction and an appeal path. A negative finding can qualify.

Existing free QA example · no reward or payout

Seeker identity with clear trust boundaries

Native Solana Mobile participation

Kotlin + Jetpack Compose. MWA and wallet signatures authenticate users. Server-side .skr ownership verification gates participation.

Accessible conversations

Open browsing, reports, blocking and moderation. English defaults. Chinese reduces interface barriers. Posts retain their original language.

Account ownership does not certify an official dApp representative.

Implementation and release evidence

Delivered and checked

Native client, Worker API, D1/R2, operator console and public website. Two-account free workflow checked on physical Seeker.

Release 1.2.1 / code 4

Original certificate. Finalized Release NFT. Public APK hash verified. Solana dApp Store status: In Review.

Public snapshot checks: 122 Node tests · 8 Python tests · API/site type checks

No Store approval, paid revenue or organic adoption is claimed.

Planned creator-funded SKR testing

Deposit before recruitment

Full tester rewards + a separate 10% creator-paid platform fee

Approved reports settle against the published rules. Unused balance is returned under the planned lifecycle.

NOT LIVE

Funding and payouts remain disabled.

Escrow source compiles and passes 13 isolated account/CPI cases. Deployment and wallet integration are pending.

Community and repeat use

Reach an initial community

Recruit dApp builders and Seeker owners around a specific version and concrete test. Store distribution can help reach them.

Measure useful outcomes

Track substantive reports, review time, disputes and return use after incentives end. Improve the product from those findings.

Store featuring or seasonal rewards are possible channels, not confirmed partnerships or evidence of demand.

A shared feedback layer for the dApp ecosystem

Listen. Test. Improve. Release. Repeat.

Better service for users. Stronger products for builders. A healthier Solana dApp Store over time.
